

Processing_Workflows

developing conventions

- 1 plan - have a concept
- 2 do - develop it!
- 3 check - then try to fix the conventions
- 4 act - reflect the learning progress and continue planning

documentation

setup

size

generating new object

xml

get number of childs

int numSites

go through all childs (i++)

i

getChild

kid

int id

String url

link to a url

String site

content of the xml-tag

output

```
xml = new XElement(this, "sites.xml");
```

reference to object xml

```
int numSites = xml.getChildCount();
```

function getChild is class function of xml

```
for (int i = 0; i < numSites; i++) {
```

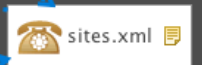

```
  XElement kid = xml.getChild(i);
```

```
  int id = kid.getIntAttribute("id");
```

```
  String url = kid.getStringAttribute("url");
```

```
  String site = kid.getContent();
```

```
  println(id + " : " + url + " : " + site);
```

sites.xml
